### **DETAILED ACTION**

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 8/3/2009 has been entered.

Receipt is acknowledged of the amendment, filed on 8/3/2009, which has been entered in the file. Claims 1-8 are pending.

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Dr. Lynn E. Barber (Reg. No. 31,734) on 9/16/2009.

The application has been amended as follows:

1. (Currently Amended) A medical-technical identification device for identifying a sterile product that is intended for a one-time-use only, when connected to a piece of medical equipment, the identification device comprising:

Art Unit: 2876

a holder fixedly connected to the sterile product, the holder including a first oblique slide surface, as seen in the direction in which the sterile product is mounted,

an information carrier fixedly attached to the holder, which is adapted to deliver, or to offer specific product information in a contactless fashion,

a seat fixedly mounted on the piece of medical equipment, the seat including a second oblique slide surface, as seen in the direction in which the sterile product is mounted,

a reading element that is connected to the seat and to a registering unit which, in turn, is connected to both a storage unit and an analysing unit,

the information carrier being mounted in a fixed relation to the first oblique slide surface wherein the first oblique slide surface and the second oblique slide surface are angled so that when the holder is fitted within the seat, the first oblique slide surface and the second oblique slide surface are brought directly together, placing the information carrier and the reading element ~~are brought~~ into contactless alignment with one another,

the sterile product being a sterile elastic hose part, a sterile saw blade, a sterile drill bit, or a sterile shaver blade,

the analysing unit functioning to deliver signals to an equipment actuating control unit,

the device further comprising a presentation unit which functions to present information from both the analysing unit and the storage unit, and

a programming unit connected to the analysing unit or the storage unit, wherein bringing the information carrier and the reading element into contactless alignment with one another enables identifying of the sterile product.

8. (Currently Amended) A device for identifying a sterile product that is intended for a one-time-use only, when the sterile product is connected to a piece of medical equipment, the device comprising:

a reading element for receiving or reading product information for products connected to the piece of medical equipment,

an information carrier mounted in a fixed relation to a first oblique slide surface, as seen in the direction in which the sterile product is mounted, of the sterile product and adapted to deliver, or to offer specific product information in a contactless fashion to the reading element, and

a seat, configured to receive the information carrier, fixedly mounted on the piece of medical equipment, the seat including the reading element and a second oblique slide surface, as seen in the direction in which the sterile product is mounted, with which the first oblique slide surface co-acts directly when the sterile product is connected to the piece of medical equipment, the second oblique slide surface corresponding to the first oblique slide surface so as to bring the information carrier and the reading element into contactless alignment with one another, wherein bringing the information carrier and the reading element into contactless alignment with one another enables identifying of the sterile product.

***Allowable Subject Matter***

Claims 1-8 have been allowed over the prior art of record.

The following is an examiner's statement of reasons for allowance: Regarding independent claims 1 & 8, the prior art of record, taken alone or in combination, fails to teach or fairly suggest a device for identifying a sterile product, when connected to a piece of medical equipment, the device comprising an information carrier mounted in a fixed relation to a first oblique slide surface, as seen in the direction in which the sterile product is mounted, of the sterile product and adapted to deliver specific product information in a contactless fashion to a reading element, and a seat, configured to receive the information carrier, fixedly mounted on the piece of medical equipment, the seat including the reading element and a second oblique slide surface, as seen in the direction in which the sterile product is mounted, with which the first oblique slide surface co-acts directly when the sterile product is connected to the piece of medical equipment, the second oblique slide surface corresponding to the first oblique slide surface so as to bring the information carrier and the reading element into contactless alignment with one another, when taken in combination with the other claimed limitations as set forth in claims 1 & 8.

Dependent claims 2-7 are allowable by virtue of their dependencies.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2876

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
